

### Homework #3

Looking at the UI from line #120 onwards

Write guessMultiplied function that takes 2 paramters

- guess (number that has to create hash matching hash stored within state)
- result (number that equals to  $\text{guess} \times 3$  - passed as value from CLI input)

Function needs to:

- validate, in the same way as submitGuess(), that guess is correct.
- $\text{guess} \times 3$  is equal to result
- subtract 100 nanomina from the balance of the snapp

command to run the file

```
npx tsc && node build/src/index.js
```
